

Plug-In for ALM

Highlights

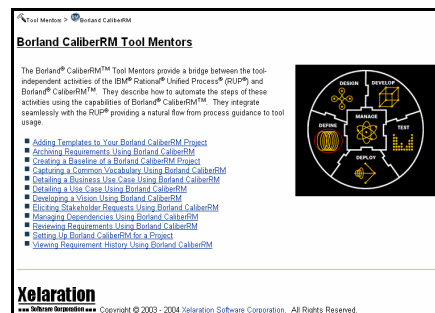

- Provides a bridge between the IBM® Rational® Unified Process® (RUP®) and the Borland® Application Lifecycle Management (ALM) tools
- Includes tool mentors and templates for Borland® CaliberRM™, Borland® StarTeam® and Borland® Together®
- Provides access to tool mentors from the RUP® browser and from RUP® activities
- Integrates seamlessly with the RUP®
- Deploys using the IBM® RUP® Builder technology provided with the RUP®

Description

The RUP® “Plug-In for ALM” is a plug-in that extends the standard RUP® with tool mentors and templates for the Borland® ALM tools. It provides a bridge between the tool-independent RUP® activities and the Borland® ALM tools to implement these activities. It describes how to automate the steps of activities using the capabilities of the Borland® ALM tools. It includes tool mentors and templates for Borland® CaliberRM™, Borland® StarTeam® and Borland® Together®.

Tool Mentors and Templates as they appear in the RUP® browser

Top Page of the Borland® CaliberRM™ Tool Mentors

Once deployed within a RUP® web site, the tool mentors are accessible from the RUP® browser and from RUP® activities. They integrate seamlessly with the RUP® providing a natural flow from process guidance to tool usage. The RUP® “Plug-In for ALM” is automatically deployable using the RUP® Builder technology provided with the RUP®.
